70 %

has been produced with a general recycled PP / PE content as mentioned above.

The process involves *collecting* used FIBCs from various high-end packaging sectors (primarily the Food and Agro industries) thoroughly *cleaning, segregating* and *re-granulating* them “state of the art” in order to prevent any cross contamination.

The recycled granulates are used in various components of the Möbibag with a maximum content, to maintain the required strength parameters *according the applicable ISO regulations (ISO 9001 and ISO 21898)*. Safeflex guarantees to retain a min average of recycled raw material, to reduce the ecological footprint of this product; together towards a sustainable and circular economy.
